746. Min Cost Climbing Stairs

Easy

[6736](#)[1128](#)[Add to List](#)[Share](#)

You are given an integer array `cost` where `cost[i]` is the cost of i^{th} step on a staircase. Once you pay the cost, you can either climb one or two steps.

You can either start from the step with index `0`, or the step with index `1`.

Return the minimum cost to reach the top of the floor.

Example 1:

Input: `cost = [10,15,20]`

Output: 15

Explanation: You will start at index 1.

- Pay 15 and climb two steps to reach the top.

The total cost is 15.

Example 2:

Input: `cost = [1,100,1,1,1,100,1,1,100,1]`

Output: 6

Explanation: You will start at index 0.

- Pay 1 and climb two steps to reach index 2.

- Pay 1 and climb two steps to reach index 4.

- Pay 1 and climb two steps to reach index 6.

- Pay 1 and climb one step to reach index 7.

- Pay 1 and climb two steps to reach index 9.

- Pay 1 and climb one step to reach the top.

The total cost is 6.

Constraints:

- `2 <= cost.length <= 1000`
- `0 <= cost[i] <= 999`
